

ABSTRACT

Information items related to a plurality of musical pieces designated can be stored at a time. A storage means 1a can hold the information items related to contents. A receiving means 1b receives information items related to a plurality of contents broadcast. A temporary storage means 1c stores the information items 4 related to the contents, for some time. An instructing means 1d instructs that the related information items stored in the temporary storage means 1c be recorded in the storage means 1a. When instructed by the instructing means 1d, the recording means 1e records the related information items 5a stored in the temporary storage means 1c, as one set 5, in the storage means 1a. At the same time, the recording means 1e records in the storage means 1a the name of this set, in association with the set 5. The related information items can therefore be recorded in accordance with a single instruction.
